**Timing Mode**

Input voltage is applied continuously. Upon closure of the normally open isolated external switch, the load is energized, and remains energized as long as it is closed. When the external initiate switch opens, the time delay is started.

At the end of the time delay, the load is de-energized, and the timer is ready for another cycle.

**TH3M Timers**

The TH3M timers are solid state output delay on break timers in a fully encapsulated 2” x 2” case. Time adjust can be with on board potentiometer, external resistor or factory fixed time.

**Features**

- Digital timing, solid state output
- 1 Amp current handling
- 10 Amps AC single-cycle surge handling
- ±0.1% Repeat accuracy
- Factory fixed or variable timing adjust

- Single screw mounting through center mounting hole
- Standard 6.35mm (0.25”) 5 terminal quick connects
- 100% Operational testing before shipping
- RoHS compliant
**FIXED TIME PERIODS**

Input Voltage:
- VAC: 24 or 120
- VAC: 230 (±20%)
- VDC: 12 or 24
  Special AC or DC voltages available

Initiate: Dry contact initiate

Time Delay:
- 0.1 sec. to 24 hours (1 sec., 10 sec., 100 sec., 1000 sec. are standard)
  Special ranges available on request

Repeatability: ±0.1% (under fixed conditions)

Reset/Recycle Time: 150 milliseconds maximum

Initiate Time: 16 milliseconds

---

**Solid State Output Form:**
- Normally open 1 Amp steady state,
  10A single-cycle surge

**Life Expectancy:**
- No predictable failure if used within operating parameters

**Protection:**
- Transient Protection: 18 joules
  Dielectric Strength: 1800V RMS 60Hz

**Temperature Ranges:**
- Storage: -40°C to +85°C
  Operating: -25°C to +65°C

**Physical Data:**
- Surface mount with single #8 or #10 screw, totally encapsulated

---
