THC Timers

THC timers are solid state output units with digital timing. The THC comes in a 2” square case. Ease of installation and hook-up is a primary design benefit. All models with integral time adjustment knob or factory-fixed time require only two connections. They may be wired in-line just like a single pole switch.

Units with external time adjustment have two additional terminals for the resistor or potentiometer.

*Note: Available with 277 VAC input rating.*

Timing Mode

Application of input voltage to the timer starts the time delay. At the end of the delay period, the load is energized. To reset, remove the input voltage to the timer.
