

Timing Mode: **DELAY ON BREAK**  
 Category: **TIMER WITH RELAY**  
 Series: **TGMLB**

**CUBE RELAY, 10-20 AMPS**

**TGMLB Timers**

TGMLB series Cube Relay Delay on Break timers are a unique combination of digital CMOS timing circuitry with a relay output in a compact 2" x 2" configuration.

For users of solid-state timers, these units provide the same functional performance as plug-in relay timers, but at significant cost savings.

Key features: Uses a live or hot initiate switch; relay common is internally connected to (+) or hot.

**Timing Mode**

Input voltage is applied continuously. Upon closure of the normally open live external initiate switch, the load is energized, and remains energized as long as it is closed. When the external initiate switch opens, the time delay is started. At the end of the time delay, the load is de-energized, and the timer is ready for another cycle.

**FEATURES**

- High current-carrying capacity up to 20 amps, 1.5 HP
- Transient protected
