TGLR Timers

TGLR series Cube Relay Interval timers are a unique combination of digital CMOS timing circuitry with a relay output in a compact 2" x 2" configuration.

These units provide the same functional performance as plug-in relay timers, but at significant cost savings.

Timing Mode

When power is applied, the relay transfers.

If control switch closures occur more frequently than set time, nothing happens.

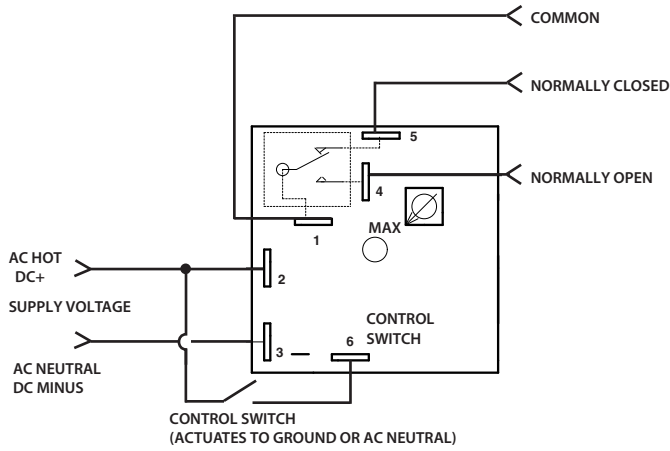

If control stays closed or open longer than set time, the relay opens.
