AIROTRONICS
Timers and Controls **ACT**

A division of Pelco Component Technologies

MARKET: HVAC, Food Equipment, Panel Builders, Machine Builders, Automation Control, Production Machinery, Refrigeration, Heating Equipment, Lighting, and more.

GROWTH MARKETS: Lighting, Heating, Automation Equipment

FUNCTION: Toroid transforms sensed current into low current to turn on LED. Verifies presence of current in a conductor, indicating equipment status such as loss of prime in pumps, mixer performance, feed rates and other current-sensing conditions.

PURPOSE: Remote monitoring of motors, heaters, lamps, and other AC current loads with a red or green LED providing visual confirmation the load is energized.

CATEGORY: Current Sensor with LED

APPLICATION: Remote monitoring of AC current load via LED indicator

SERIES: CS

FEATURES:

Low cost current sensor with remote sensing capability

Panel-mount LED in choice of Green or Red

Current Sense Toroid supplied with easy-to-install 2 wire connection

LED is activated with minimum monitored current; one wire wrap is 2 amps, two wraps is 1 amp

Monitors currents up to 50 amps

Instant visual verification of load current

No need to cut sense wire; simple pass-through installation

Compact size is easy to locate in tight spaces
